

Rodrigue Compaore

Software Engineering Manager | Technical Lead | Enterprise Platform Architect | Oklahoma City, OK | Remote, TX, OK, relocation

SUMMARY

Software engineering leader with 10+ years designing, building, and leading enterprise platforms across reporting, analytics, AI document processing, secure file workflows, APIs, Kubernetes, Helm, and cloud delivery. Leads teams while staying close to architecture, delivery, code quality, and production ownership.

LEADERSHIP AND DELIVERY

- Leads and mentors 12 engineers through architecture reviews, code reviews, technical coaching, one-on-ones, and delivery planning.
- Owns budget planning and prioritization for reporting and ETL solutions.
- Partners with product stakeholders to scope, prioritize, and deliver business-critical platforms.
- Supports production systems through monitoring, incident response, performance tuning, and operational improvement.

SELECTED PUBLIC-SAFE WORK

Enterprise Reporting Platform - C# | .NET | SQL | Kafka

Configurable reporting and ETL workflows supporting approximately 1,000 reports per day with reusable components and production ownership.

ClickHouse Analytics Platform - ClickHouse | SQL | ETL

Tenant-scale analytics work across approximately 100 tenants, focused on schema design, ingestion, and query optimization.

AI Reporting Platform - Python | FastAPI | OCR | LLMs

Document extraction and validation workflows across approximately 1,000 files using OCR and LLM integration.

Enterprise File Platform - .NET | REST APIs | SFTP | RabbitMQ

Secure file storage, sharing, transfer, and background processing workflows; improved transfers to be approximately 50% faster.

SKILL EVIDENCE MATRIX

Kubernetes / Helm Cloud-native delivery, IaC, CI/CD, AWS, Azure, production ownership.	Engineering Manager 12 direct reports, mentoring, reviews, delivery planning.
ClickHouse / Analytics Tenant-scale data platform work across approximately 100 tenants.	AI / OCR / LLMs AI reporting, validation, structured extraction, document workflows.
APIs / Async Systems REST APIs, RabbitMQ, Kafka, secure file workflows, background processing.	Architecture Judgment Explains patterns, tradeoffs, reliability, observability, and delivery without exposing NDA details.

TECHNICAL SURFACE AREA

C#, .NET, ASP.NET Core, Python, FastAPI, JavaScript, TypeScript, React, SQL, SQL Server, MySQL, ClickHouse, ETL, RabbitMQ, Kafka, Docker, Kubernetes, Helm, Infrastructure as Code, GitLab CI/CD, GitHub Actions, AWS, Azure, OCR, LLM integration, document processing.

WHY ME

- Leads teams and remains close to architecture, code quality, delivery planning, and production ownership.
- Builds across data, AI, cloud, APIs, secure file workflows, reporting, analytics, Kubernetes, Helm, and CI/CD.
- Communicates architecture tradeoffs clearly while respecting NDA boundaries.
